

Document Sharing – Delivery of Documents to Practices via Docman

Quick Reference Guide

The Connecting Care document sharing solution enables Practices to receive and view clinical documents directly into Docman, without having to download them from the CDS portal or receive them via other methods.

1. Set-up

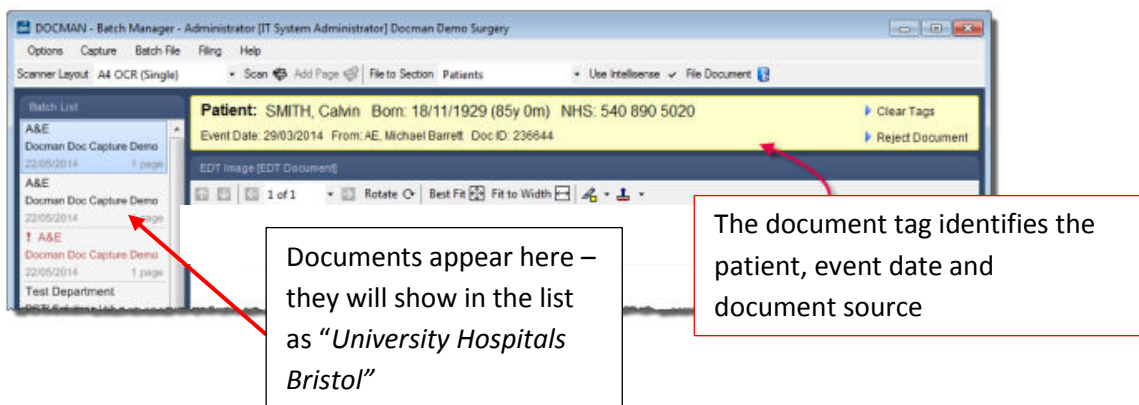

Documents will be delivered into the Practice’s Docman Scheduler. The Docman Scheduler runs in the background of the chosen workstation and runs collection tasks automatically. The collection tasks are pre-configured and do not need to be created by the practice

2. Receiving documents

The Scheduler collects documents into **Batch Manager** ready for filing. To view these documents, go into the **File Documents** section from the Docman main menu.

When a discharge summary arrives in the **Batch Manager**, it will be viewable in the **Batch List**.

The screenshot shows the Docman Batch Manager interface. On the left, a 'Batch List' pane displays a document entry: 'A&E Docman Doc Capture Demo' with a date of '22/05/2014' and a page count of '1 page'. A red arrow points from this entry to the main document view. The main view displays the document details for 'Patient: SMITH, CaMin', born '18/11/1929 (85y 0m)', with NHS number '540 890 5020'. The event date is '29/03/2014', from 'AE, Michael Barrett', and the document ID is '236644'. A red arrow points from the patient information to a callout box. The callout box contains the text: 'The document tag identifies the patient, event date and document source'. Another red arrow points from the document source 'AE' in the list to another callout box containing the text: 'Documents appear here – they will show in the list as “University Hospitals Bristol”'.

3. How do I accept/process documents that have come through Document Sharing?

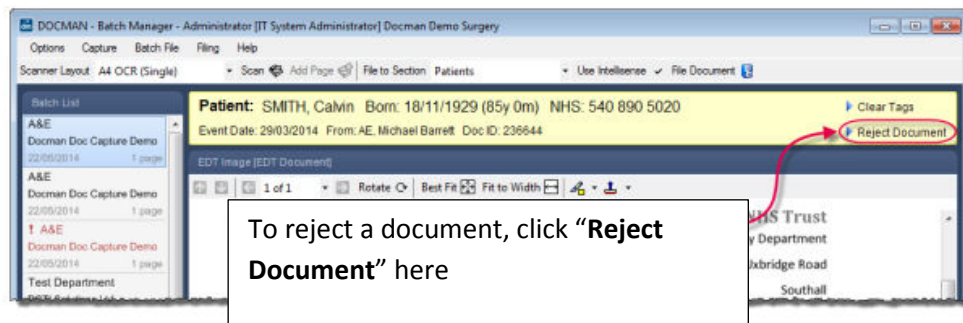

The document can be opened by double clicking on the document from the **Batch List**. If you are happy with the document, you can continue onto file / code the document as per your normal document process.

Once the document has been processed it will disappear from the **Batch List**

4. How do I reject a document summary?

A practice will occasionally need to reject a document because the document is incomplete, illegible or relates to a patient that is not registered at the practice.

To reject a document, click the Reject Document option to the right of the Tag information.

Docman will prompt you for a rejection reason.

Click the most relevant rejection reason from the list to select and confirm the rejection of the document.

**The rejection reasons are pre-configured within Docman and cannot be changed by Connecting Care.*

This rejection is fed back to the Trusts for action / update.
